Oct 29, 2022

Progress update
- Philippe has done some progress on the visualization, he hasn't done webdev in a long time so it's taking longer than expected
- Piyush: Finished midterms recently, will start working on the assignment today
- Mack: No progress so far, working on assignments/midterms
- Delay caused mainly by midterms, less midterms in the next week, so much more progress can be made. Assignment due Friday Nov 4.

Libraries to use
- Decide on whether or not we should use libraries like material UI
  - We will use this

Meeting frequency
- The next week, we will be meeting daily at 10PM starting Monday Oct 31
  - What is the purpose:
    - To track what we have done so far
    - Any changes since the last meeting

Blameless postmortem
- Need to do this after monday, we will try to do this after lecture
- Schedule 9:30PM, if lecture ends early, we can do it during that timeslot

Schedule a call with the instructor monday or tuesday
- Do this after blameless postmortem
- Why did we lose so many marks for 1 thing?
  - His notes are vague

Implementation
- Front end tests: How do we do them
  - Jest
  - Won't have front end tests at the beginning, need to investigate more into how to do this.
- Backend
  - Use pytest
- We want all tests to pass before accepting a PR
  - Use github actions
  - Mack to setup github actions
- Docker
  - Weren't able to set it up previously, we want to do that for A2
  - Philippe to do this
- Pull requests

- Have 2 people review them
-
